

DTS

DRIVER TRAINING SIMULATOR

The Driver Training Simulator (DTS) is a three-channel plasma screen immersive driving environment. Drivers will be trained to recognize and anticipate hazardous driving situations in both common and difficult environments, handle environmental factors such as adverse weather, and practice collision avoidance. The DTS is designed to give you a driving experience that is specific to not only the type of vehicle that you drive, but to the specific environment that you deal with every day.

The DTS system is housed in a mobile trailer, which is brought to your location, at no additional cost to members. Individual training is done in 60 minute increments. The scenarios used will address the critical driving skills needed to be a safe driver. No matter what type of vehicle you drive, the DTS will help you become aware of and anticipate hazardous driving situations in both everyday and difficult environments.

Vehicle Types

- Ambulance
- Dump Truck
- Garbage Truck
- Pickup Truck
- SWAT Unit
- Snowplow
- Passenger
- Police
- Buses
- Fire
